# ENVIRONMENTAL MONITORING WITH PRESAGE

Presage helps you ensure your entire facility is getting swabbed in a given period, but not predictably! Uncover problems you may miss by randomizing your environmental samples within your overall Environmental sampling schedule.

Using Presage to map environmental testing, you can trace sample results across your plant. With time-based animation, Presage will track the vector of a pathogen within your plant, over the course of hours, days, or weeks. With mapping and randomized sampling in Presage, discover small issues before they become big problems.
